

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

to the putting away of those petty restrictions which were formerly a constant menace, and erected an impassable barrier between the teacher and the taught. We no longer, like the Irishman, stand aloof with a chip on the shoulder, and dare any of the boys to knock it off; but we invite confidence, and receive it, and our relations with the students is not that of taskmaster and toiler, but that of guide and friend. Had our worthy president done no more than break down that old middle wall of partition, he would for this great feature of his administration alone deserve the everlasting gratitude of this community. And let me entreat you, my brethren, not to allow any one to reinstate this wall, or even to lay the first brick in its reconstruction.

Most of our sister institutions are struggling with hobbledehoydom still. Only a few days ago, one of our distinguished graduates, and a highly valued professor in another New England college, said to me: "Cambridge men do not appreciate the advantages they have gained by setting their students free from petty restraints. Treat men as boys and they will act as boys. With us the boyishness first breaks out in the chapel, and then extends to all the classrooms. It belittles all our work, and dampens all our enthusiasm." My friends, in an institution of learning like this, you cannot prize too highly the ennobling virtue of enthusiasm. To awaken it is to make the boy a man. To fail to arouse it, at least in something, is to miss the great end of education. But such virtue cannot be had without cost. Enthusiasm implies of necessity freedom; and who in this New England, after a century's experience, is not willing to incur the risk and pay the cost which freedom entails?

Finally, brethren, while noble character is the crowning grace of education, scholarship is the brightest jewel in this crown; and you may well ask, Has learning kept pace with privilege? But in attempting to answer this question I find myself in the dilemma of the learned commentator who had devoted a chapter to the snakes of Iceland. He could find no snakes, and I can find no comparison. The scholarship of to-day rests on a level so much higher than that of twenty-five years ago, that there is no common measure. I will confine myself to my own department, of which I have accurate knowledge, and of which I may speak unreservedly, because it has so broadened out that only a small part of the instruction now devolves on the director. Besides the very large class, before referred to, which attended the elementary lectures, there were actually working in the chemical laboratory last year more students than were comprised in the whole college of my day, and the contributions to chemical science which will soon be published, as the result of the year's work of students as well as of teachers, will fill more than one half of the annual volume of our American academy. A recent writer in the *Atlantic Monthly*, discussing "Why our Students go to Europe," pays us what he evidently regards as a high compliment in saying, "Now the chemical course at Harvard equals that in most German universities." Our own students who have gone from the laboratory to study abroad will tell you, as they have told me repeatedly, that, whatever advantages may be gained by association with men of special attainments, there is no University in Germany, or elsewhere, at which the instruction is at once so broad, so full, and so thorough as at home. How does this compare with recitations from "Stöckhardt's Chemistry," illustrated by popular lectures?

Fellow alumni, our attention has been so often and so loudly called of late to the shady side of college life, that, whatever opinions you may have formed, I am sure you will not blame me for inviting you on Commencement day to bask for a few minutes in its sunshine. At such a time we can only meet assertion with assertion; but I have spoken solely of what I do know, and if any one is not convinced I invite him, following the example of the anxious mother, to come and dwell among us and partake of our life. Obviously I am no pessimist, but also I am no optimist. The members of this great family are all frail human souls. Evil is ever present with us, as it was with our fathers and will be with our children. We cannot escape the curse. But we have faith in truth and right, and will fight the good fight to the end.

"O yet we trust that somehow good
Will be the final goal of ill,
To pangs of nature, sins of will,
Defects of doubt, and taints of blood."

We all boast the same intellectual parentage. You for the most part have gone out into the world and found a career elsewhere. I am one of the few who have always stayed by the homestead since I was first received into the brotherhood with the Class of 1848. For nearly half a century I have known the dear old Mother as well as a devoted son possibly could; and let me assure my brothers who have come home to keep this feast, that during her long life our Alma Mater was never so worthy of our admiration and veneration, of our love and devotion, as she is this day.

BOOK-REVIEWS.

A Manual of Machine Construction, for Engineers, Draughtsmen, and Mechanics. By JOHN RICHARDS. Philadelphia, Lippincott. \$5.

AN experience in constructive engineering extending over a period of thirty-five years, in both Europe and America, has admirably qualified Mr. Richards for the task of preparing this volume. That the task is well done, will not be doubted by those acquainted with his previous work in the same line, which includes a number of treatises on various mechanical subjects.

The book is unique in more than one respect. It is intended to meet the every-day wants of the practical man, in draughting-room or work-shop, and is consequently more a work of direct application than of theoretical instruction. While concise, as such a book must necessarily be, it nevertheless touches with sufficient detail on many minute points concerning which very little has heretofore been accessible in print. The author states that the preparation of the work was suggested many years ago by the inconvenience of common references such as are required in usual machine practice, and by a belief that some more simple form, adapted directly to use, and confined to those things most commonly dealt with, would be of value. Being made up mainly from the personal experience of the author, reproducing and classifying work already constructed, the book presents in a convenient form material gathered in the course of a long and diversified experience, the exact rules formulated in accordance with theoretical considerations being modified to suit the limitations and exigencies of actual practice.

A peculiar feature of the book is its make-up, being bound so that it opens at the end of the page instead of at the side, after the manner of a reporter's note-book, or legal-cap paper; and each alternate page is left blank, for convenience in reference and also to receive notes and original matter. The page titles and numbers are placed at the bottom of the page to facilitate convenience in reference.

The volume is divided into sections on machine design, the transmission of power, steam machinery, hydraulics, and processes and properties, followed by a section devoted to tables and memoranda of weights and measures; standards for screws, bolts, and nuts; sizes of wood and machine screws; circumferences and areas of circles; square and cube roots, etc. To engineers and draughtsmen engaged in machine design or construction, this book will prove of special value.

Monopolies and the People. By CHARLES WHITING BAKER. New York. Putnam. 12°. \$1.25.

THIS work is an attempt to solve the problems presented by the new form and organization of industry. The author is impressed, as most persons are, by the rapid growth of "trusts" and other combinations of a monopolistic character, and by the evils they sometimes produce; and he here undertakes to furnish a remedy for those evils. He writes in a judicial tone and with an evident desire to be fair to all parties. He gives an account of the origin and growth of the combinations known as "trusts," with other chapters on monopolies in minerals and transportation, placing also the labor unions in the general class of monopolies. He regards them all as natural outgrowths of existing industrial conditions, and while he acknowledges that they are in some respects beneficial, he is especially impressed with the abuses that attend them. So far his readers will probably agree with him; but when he comes to state the remedies for the evils he speaks of, we, at least, are obliged to dissent. He holds that the true remedy for monopoly is

not abolition but control, and the control he advocates involves what we should call a violent interference by the state with all the operations of industry. For instance, he proposes that the United States shall buy up all the railroads in the country, paying for them with three per cent bonds, and then lease them to private companies. All fares and freight tariffs are to be fixed by government commissioners, and the government is also to have a share in the directorship of the companies. Mining and gas companies are to be treated in a similar way, but on the subject of manufacturing monopolies Mr. Baker speaks with more hesitation, the principal measure he proposes being a requirement that all such associations as the "trusts" shall sell to all persons at the same price. Such are his remedies for the evils of monopoly; but to our mind they involve altogether too great an interference with the natural course of industry, and we believe the American people will agree with us in this opinion. New laws will doubtless be needed to remedy the abuses that Mr. Baker has here set forth; but such a widespread interference with industry as he advocates would, we feel sure, result disastrously.

AMONG THE PUBLISHERS.

BERGER'S "French Conversations, Idiomatic Expressions, and Proverbs" (New York, F. Berger) has reached a fifth edition.

—Macmillan & Co. will publish early in the fall a revised edition of Mr. Alfred Austin's poem, "The Human Tragedy," which will contain likewise a prefatory essay on "The Present Position and Prospects of Poetry."

—J. Maisonnave, publisher and bookseller, of 25 Quai Voltaire, Paris, has issued a catalogue of rare and valuable works relating to America, in which attention is specially called to the "Letter of Christopher Columbus announcing the discovery of the New World," in the original Spanish text, first edition.

—Cassell & Company have just ready Max O'Rell's new book, "Jacques Bonhomme," a lively description of French manners and customs, to which is added "John Bull on the Continent" and "From my Letter-Box."

—Lee & Shepard have ready "Observation Lessons in the Primary Schools," by Louisa P. Hopkins, a manual for teachers, presenting practical methods for teaching elementary science to the young.

—A. C. McClurg & Co., Chicago, will publish shortly, "Fact, Fancy, and Fable," by H. F. Reddall, a work of comprehensive and cyclopedic character, presenting concise information on a great variety of subjects.

—The publishers of *St. Nicholas* announce that that popular children's magazine is to be enlarged, beginning with the new volume, which opens with November, 1889, and that a new and clearer type will be adopted.

—During the coming volume *The Century* is to have an illustrated series of articles on the French salons of the seventeenth and eighteenth centuries, including pen portraits of many of the leaders and a detailed account of the organization and composition of several historical salons. A great number of interesting portraits will be given with the series.

—Houghton, Mifflin & Co. have published in the series of American Statesmen "Benjamin Franklin," by John T. Morse, Jun., the editor of the series and author of the volumes on John Adams, Thomas Jefferson, and John Quincy Adams; "Recollections of Mississippi," by Hon. Reuben Davis, a graphic description of life in the South for the half century before the civil war; "Literary Landmarks," a guide to good reading for young people, by Mary E. Burt, Teacher of Literature in the Cook County Normal School at Englewood, Ill., with charts; and Part iv. of the Child's "English and Scottish Popular Ballads."

LONGMANS, GREEN & CO.

NEW SCIENTIFIC BOOKS.

Physical Realism: being an Analytical Philosophy from the Physical Objects of Science to the Physical Data of Sense. By THOMAS CASE, M.A., Fellow and Senior Tutor C.C.C. Oxford. 8vo, \$5.00.

"Mr. Case has here placed before the public a theory which is in many respects strikingly new, and in all conscientiously worked out. . . . We desire to say that this book is one that ought to be read, and the theory, as here presented, must be considered by all serious students of these matters."—*Saturday Review*.

Force and Energy: a Theory of Dynamics. By GRANT ALLEN. 8vo, \$2.25.

"Written with extreme lucidity. . . . We can safely assure our readers that, whatever view they may take, they will find Mr. Allen's book pleasant and profitable reading."—*Engineer*.

A Text-Book of Elementary Biology. By R. J. HARVEY GIBSON, M.A., F.R.S.E., Lecturer on Botany in University College, Liverpool. Crown 8vo, \$1.75.

"As a text-book of elementary biology it is one of the best that has ever been published. The typography and general execution of the book leave nothing to be desired."—*Science*.

The Fundamental Principles of Chemistry Practically Taught by a New Method. By ROBERT GALLOWAY, M.R.I.A., F.C.S., Hon. Member of the Chemical Society of Lehigh University, etc. With 71 Woodcuts and 729 Exercises and Answers. Crown 8vo, \$1.75.

A Hand-Book of Cryptogamic Botany. By ALFRED W. BENNETT, M.A., B.Sc., F.L.S., Lecturer on Botany at St. Thomas's Hospital; and GEORGE MURRAY, F.L.S., Senior Assistant Department of Botany, British Museum. With 378 Illustrations. 8vo, \$5.00.

No general hand-book of Cryptogamic Botany has appeared in the English Language since Berkeley's, published in 1857. The present volume gives descriptions of all classes and more important orders of Cryptogams, including all the most recent discoveries and observations.

Electricity for Public Schools and Colleges. By W. LARDEN, M.A., author of "A School Course in Heat," in use at Rugby, Clifton, Cheltenham, Bedford, Birmingham, King's College, London, and in other Schools and Colleges. With 215 Illustrations and a Series of Examination Papers with Answers. 12mo, \$1.75.

Astronomy for Amateurs: a Practical Manual of Telescopic Research adapted to Moderate Instruments. Edited by J. A. WESTWOOD OLIVER, with the assistance of Messrs. MAUNDER, GRUBB, GORE, DENNING, FRANKS, ELGER, BURNHAM, CAPRON, BACKHOUSE, and others. With Illustrations. 12mo, \$2.25. "The book supplies a real need."—*Sidereal Messenger*.

Modern Theories of Chemistry. By Prof. LOTHAR MEYER. Translated from the fifth edition of the German by P. PHILLIPS BEDSON, D.Sc., Lond., B.Sc., Vict., F.C.S., Professor of Chemistry, Durham College of Science, Newcastle-on-Tyne, and W. CARLETON WILLIAMS, B.Sc., Vict., F.C.S., Professor of Chemistry, Firth College, Sheffield. 8vo, \$5.50.

NEW MEDICAL BOOKS.

The Diseases of Children. Medical and Surgical. By HENRY ASHBY, M.D., Lond., M.R.C.P., Physician to the General Hospital for Sick Children, Manchester; and G. A. WRIGHT, B.A., M.B., Oxon., F.R.C.S., Eng., Assistant Surgeon to the Manchester Royal Infirmary, and Surgeon to the Children's Hospital. With 138 Illustrations. 8vo, pp. xx-681. Cloth, \$6.00.

Lectures on Pathological Anatomy. By SAMUEL WILKS, M.D., F.R.S., Consulting Physician to Guy's Hospital, and the late WALTER MOXON, M.D., F.R.C.P., Lecturer on Pathology at Guy's Hospital. Third edition, thoroughly revised. By SAMUEL WILKS, M.D., LL.D., F.R.S. 8vo, \$6.00.

The Diagnosis and Treatment of Diseases of Women, including the Diagnosis of Pregnancy. By GRAILY HEWITT, M.D. Fourth edition, in great part rewritten and much enlarged, with 211 Engravings on Wood, of which 79 are new in this edition. 8vo, \$6.00.

A Short Manual of Surgical Operations: Having Special Reference to many of the Newer Procedures. By ARTHUR E. J. BARKER, F.R.C.S., Professor of Surgery and Pathology at the Royal College of Surgeons of England. With 61 Woodcuts in the Text. Crown 8vo, \$3.25.

Notes on Physiology, for the Use of Students preparing for Examination. New (fifth) edition. With 137 Woodcuts. By HENRY ASHBY, M.D., Lond. Fcp., 8vo, \$1.50.

Hand-Book on Diseases of the Skin. By ROBERT LIVEING, M.A., and M.D., Cantab., F.R.C.P., Lond., etc., Physician to the Department for Diseases of the Skin at Middlesex Hospital. With Especial Reference to Diagnosis and Treatment. Fifth edition (1888), revised and enlarged. Fcp., 8vo, \$1.50.

NEW MEDICAL AND SCIENCE CATALOGUES SENT UPON APPLICATION.

For sale by all Booksellers. Sent on receipt of price by the Publishers.

LONGMANS, GREEN & CO., 15 E. 16th Street, New York.
